PROFESSIONAL SUMMARY

Full-stack developer who designs, builds and deploys web applications end to end, from the database to the live site. Four apps are live, including Oja Ledger, an offline bookkeeping app with tamper-evident records; Travel & Stays, a booking marketplace with Paystack payments; and RedCart, an online store with an AI assistant. I write tested code (83 and 108 passing tests on two of the apps) and care about the parts users trust: payments, verification and security. Computer Engineering student (CGPA 3.79/5.00) seeking junior full-stack or frontend roles, remote or in Nigeria.

RELEVANT WORK EXPERIENCE

Full-Stack Developer (Freelance) **Dec 2025 – Present**

Remote · Building and shipping my own products end to end

- **Oja Ledger** (oja-ledger.vercel.app): built an offline double-entry bookkeeping app for Nigerian small businesses in strict TypeScript and React: integer-kobo money, a SHA-256 hash-chained append-only journal, VAT and small-company tax reports (Nigeria Tax Act 2025), and property-based tests (fast-check) proving the books always balance.
- **RedCart** (redcart-ten.vercel.app): built a Django + PostgreSQL online store with 103 products, search, categories, cart, user accounts, Google sign-in, a Paystack checkout (test mode) and an AI shopping assistant, plus a Next.js + TypeScript storefront reading its REST API; 83 tests run in CI.
- **StudyFlow** (studyflow-xt1x.onrender.com): a study platform with a 24/7 AI coach (Groq) that renders LaTeX, secured with OAuth, rate limiting and magic-byte upload checks; 108 tests in CI.

Software Engineering Intern, MALhub **Aug 2026 – Oct 2026**

Ilorin, Kwara State · On-site · Industrial Training (SIWES)

- Built Travel & Stays (travel-stays.vercel.app), a two-sided booking marketplace for verified stays and local tours across 10 Nigerian cities, with separate guest, host and tour-guide roles: search by city, dates and guests, listings and host onboarding.
- Integrated Paystack for naira payments by card, bank transfer and USSD: prices are calculated server-side, and a booking is only marked paid after the server verifies the exact amount and currency with Paystack (covered by 11 unit tests in CI). A Postgres exclusion constraint makes double bookings for the same dates impossible.
- Designed the ID and property-document verification flow for hosts and tour guides so only verified listings go live; shipped through Git workflows and code reviews with the engineering team.

Customer Support & Sales Assistant, Tools by FK **Jul 2026 – Present**

Remote · Part-time

- Help students and professionals choose AI and digital tools (ChatGPT Plus, Claude Pro, Canva Pro and others), and handle orders, subscription activations and account access until each customer is set up.

ROLE-RELEVANT SKILLS

Full-stack development: REST API design, relational database design (PostgreSQL), authentication and role-based access, payment flows and verification, marketplace logic, automated testing, CI/CD (GitHub Actions)

Frontend: TypeScript, JavaScript, React/Next.js, HTML5, CSS, Bootstrap, responsive layouts, light and dark themes

Backend: Python, Django, SQL, server-side validation, secure file uploads, rate limiting

AI features: LLM API integration, prompt design, safe handling of AI output

Working style: code reviews, clear written communication, customer-facing support

TOOLS & TECHNOLOGIES

Python · Django · TypeScript · JavaScript · React/Next.js · PostgreSQL (Neon) · HTML/CSS · Bootstrap · Git & GitHub · Vercel · Render · Paystack API · Groq API · Google OAuth

EDUCATION

B.Eng. Computer Engineering, Federal University of Technology Minna **2024 – 2028 (expected)**

CGPA 3.79/5.00 (Second Class Upper). Coursework: software engineering, object-oriented programming in Python, database design, data structures.

CERTIFICATIONS

Frontend Development (12-Week Frontend Coding Course), MALhub, Oct 2026 (Credential ID: malhub1086)
